## Working GREEN

### Painting GREEN

**LEEDS** requirement for new buildings.

**(OTC)** Ozone Transport Commission regulations.

**No and Low VOC** (Volatile Organic Compounds)

“Green products” require training— coverage capability and drying differ from standard paints.

### Roofing GREEN

**Sustainable roofing and waterproofing.**

**Lowers roof heat temperatures.**

Save between **20% and 70%** of the cooling energy used in a building.

Save money, reduce air pollution and the need for re-roofing.

#### Standard Roofing Materials cause:

- Increased energy use.
- Higher peak electricity demand, raised electricity production costs, and a potentially overburdened power grid.
- Reduced indoor comfort.
- Increased air pollution due to the intensification of heat radiated.
- Accelerated deterioration of roofing materials.
- increased roof maintenance costs.
- High levels of roofing waste sent to landfills.

**K. Morgan offers a selection of water-borne paints to replace oil-based paints.**

**We have the training and experience.**
